

Mycelium Gold Bitcoin

Specific Handling Precautions

<https://000.mycelium.com/>

Owning MGB distinguishes itself from possessing other highly valuable small items. The simultaneous theft of your private key and decrypting password remains an impossibility from a remote location. However, exercise caution in the presence of cameras (such as surveillance devices, traffic recorders, smartphones, etc.) and long-range optics. When engaging in technical maneuvers with your coin, ensure privacy by performing them in the absence of any onlookers and only in the company of trusted individuals.

MGB displays information on both sides through QR codes, while a series of digits graces the coin's edge. Upon acquiring a new MGB, a secure adhesive seal envelops its edge. Only break this security seal when you decide to withdraw the bitcoin value stored within your coin.

Should you wish to clean your coin, please be mindful that not all solvents are suitable for application on gold. An ultrasonic jewelry cleaner can be utilized for this purpose. Alternatively, you can use water and a small amount of ammonia. Perhaps the simplest approach entails mixing a mild dishwashing liquid with warm (never hot!) water in a bowl, soaking your MGB in the solution for 10 minutes, and then delicately brushing away any dullness using a toothbrush with light and gentle motions. Rinse the coin in warm water and gently dry it with a clean, soft cloth to restore its exquisite allure.
